Solving the Price-tag Problem

Enabling Dynamic Pricing

Building the Behavioral Intelligence
Infrastructure for Physical Retail

Adilson Carlos Batista

Founder & CEO

Patent Pending

Bootstrapped

MVP Ready

Seeking Smart Capital

Building the Future of Commerce

Where does this journey begin?

In a small agricultural region of Brazil, where life is slow, people depend on cars, patience, and making the most of what they have.

Where I Come From

Small-Town Brazil

I grew up in a humble family
in a small agricultural region.
We did not have privileged
access to resources or networks.
But I learned to understand
the rhythm of the land
and the value of hard work.

- Strawberry farming and food production

- Direct experience with agricultural cycles

- Understanding of uncertainty and variation

- Resourcefulness — doing more with less

- A real-world foundation for problem-solving

Foundation: The real world of food and farming

Founder Bio — Adilson Batista

Education: B.Eng. in Electrical Engineering — UFSJ

Graduate: M.Sc. in Electronic Engineering & Computing — ITA

Research: Ph.D. Research in Electronic Engineering & Computing — ITA

Experience: 15+ years with MATLAB/Simulink and embedded systems

Industry: Aerospace engineering and autonomous unmanned systems

Academic: Professor and Computer Engineering Coordinator — Unoesc

Entrepreneur: Founder & CEO of eBezout AI — Bootstrapped and lean

Background: Unique connection to strawberry farming and CSA

What do you do when life changes your plans?

You adapt, learn, and rebuild

Reinvention Through Resilience

Disruption: Brazil's economic and political crisis

→ Difficult start in engineering career

Rebuilding: Embedded Systems Engineer

→ Aerospace engineering and autonomous systems

Disruption: Father's cancer diagnosis

→ Personal and professional pressure

Rebuilding: Professor & Engineering Coordinator

→ Teaching, leadership, curriculum development

Disruption: COVID-19 pandemic

→ Loss of Sales Engineering position

Rebuilding: eBezout AI – Founder & CEO

→ Full commitment to entrepreneurship

Each disruption forced adaptation, learning, and rebuilding

What did engineering teach me?

To break complex problems into smaller parts, connect them, and build solutions that work as a system.

From Engineering to Systems Thinking

Computational Modeling

MATLAB & Simulink

AI / Neural Networks

Embedded Systems

Autonomous Systems

Aerospace Engineering

Sensor Integration

15+ years of technical and systems engineering experience

What brought me to entrepreneurship?

The Entrepreneur Behind eBezout

Technical: AI, engineering, systems, electronics, software, data

Business: Customer discovery, sales, communication, leadership

Real-World: Food production, retail observation, operational problems

Vision: AI Commerce, physical retail, food intelligence

eBezout sits at the intersection of technology, business, and food

What is wrong with the physical price tag?

It is static, costly to update, and only a one-way interaction

The Price Tag is a Relic

Piggly-Wiggly, 1917

× Costly to print and manage

× Static — cannot adapt to demand

× One-way — no customer interaction

× No data capture, no intelligence

× Manual errors and inconsistencies

A 20th-century solution for a 21st-century problem.

How do we solve the price-tag problem?

We replace the static label with a simple digital connection: customers scan a QR Code with their smartphone and start a conversation with the retailer.

Intelligence
Data
Insights
Prediction

The convergence of food, retail, technology, and AI

What does the supermarket miss before the purchase?

It sees what customers buy, but not what they consider.

Retail Sees the Purchase

What Retail Knows

- Products purchased
- Transaction value
- Payment completed
- Historical sales

What Retail Never Sees

- Products considered
- Purchase intent
- Customer journey
- Individual preferences

Without customer intent, retailers optimize only the final transaction.

How can we digitize physical retail without adding more hardware?

By connecting the smartphone to the store

A New Architecture for Retail

Smartphone Camera
The scanner

QR Code
The gateway

Messaging App
The interface

Conversational AI
The intelligence

Works with the smartphone customers already have

The infrastructure is already in consumers' pockets

How do we make this simple for the customer?

Scan & Go and AI Commerce

QR Code + smartphone + AI Commerce.

A simpler path to digital physical retail.

System Architecture — eBezout AI Commerce Platform

From Idea to the Right Problem

Initial Idea (BB-Buy in a Blink): Turn an obsolete smartphone into a smart selling point, then take the solution to large physical retailers.

The Question: Why build another Scan & Go app when delivery platforms like iFood could do it?

The Insight: The core problem wasn't scanning. It was the gap between physical retail and digital data.

The Real Problem: Price tags are static and manual, creating operational costs and errors. They ultimately limit dynamic pricing. Our initial solution, however, required too many steps.

The Price Tag Problem

The Hidden Friction:

A barcode scan was only the beginning. Customers had to scan, copy, switch apps, find the retailer, and send the code. We realized the real challenge was not scanning a product, but starting a conversation with the store.

The Real Problem:

Supermarkets still depend on static, manually updated price tags. This creates operational work and errors while making frequent price changes difficult. Solving this problem can unlock smarter pricing.

Our Solution:

We replaced the multi-step barcode journey with one QR code that opens the retailer's WhatsApp conversation with the product code already attached. Scan & Go and AI commerce became the tools. Solving the price-tag problem and enabling dynamic pricing became our focus.

How did we respond when the market challenged us?

We listened to customers, changed the product

Adaptability

Setbacks: Not selected for Shark Tank Brasil. Expo Supermercados and APAS Show were beyond our budget. We learned that visibility alone is not enough.

The Pivotal Conversation: A supermarket manager asked: How will my customer start using it and connect with us on WhatsApp?

The Adaptation: Our POC with Supermercado Nova Borda is helping us refine the product in a real retail environment, with significant improvements focused on usability for supermarket staff and, above all, customers.

Persistence & Validation: Indetec UFSJ, Batch#28 PIT SJC, Centelha and ITA Challenge. Positive feedback across these programs has helped validate the problem, refine the solution and strengthen our direction.

What changes with eBezout?

One Scan Starts the Conversation

Old Journey

Barcode visible on the product

Open a barcode reader app

Scan, select, and copy the code

Switch to another app: WhatsApp

Find or start the retailer's chat

Paste and send the code

New Journey

The Bigger Realization: Retail Intelligence → Demand Forecasting → Food Intelligence → CSA

What does shopping feel like with eBezout?

Like having a helpful store assistant in your pocket—ready to answer questions, keep track of your cart, and help you complete your purchase

Shopping Becomes a Conversation

1. Enter Store

Pick up a product

2. Scan QR Code

Camera opens
messaging app

3. Chat with AI

"Is this gluten-free?"
"Total so far?"

4. Checkout & Go

Complete purchase
in the chat

Like having a personal shopping assistant in your pocket

What does eBezout learn from a shopping journey?

What the customer looked at, and when, and where, and whether they considered, added, removed, or bought the product.

The Customer Journey

Capturing the decision-making journey, not just the final transaction.

Precious Data That Gets Lost

What can an AI shopping assistant do for the customer?

Answer questions, track the cart, help manage the budget, and suggest products based on the customer's needs

Shopping Becomes a Conversation

AI Assistant

You: What's in this?

AI: Organic pasta, wheat

You: Total?

AI: \$24.50 — within budget

You: Nutrition?

AI: 450 cal, 15g protein

Financial Calculator — No surprises at checkout

Nutritional Control — Track what's in your cart

AI Learns Your Preferences — Allergies, budget, favorites

Smart Product Suggestions — Healthier or cheaper alternatives

Autopilot Shopping — AI shops for you when you're busy

Reinforcement learning — AI gets smarter with you

What do retailers gain from all these interactions?

They turn everyday customer

Global Priority
Sustainable Systems
Reduced Waste

The infrastructure for AI Commerce is now available
to every retailer with a smartphone and every consumer with a messaging app.

The convergence of technology creates unprecedented opportunity

What does eBezout help the retailer see?

Not only what customers buy, but what they **consider** and what they **intend** to do.

Retail Intelligence

Traditional Retail Data

- Products purchased
- Transaction value
- Payment completed
- Historical sales
- Inventory movement
- Final transaction

eBezout AI Behavioral Data

- Products considered
- Purchase intent
- Customer journey
- Products added/removed
- Timestamps & location
- Interaction sequence

Unprecedented understanding of consumer intent

Why does eBezout get better over time?

Every customer interaction helps the platform learn and make more value for the next customer

A Platform That Learns

What makes eBezout different?

Traditional retail mainly sees
to buy.

Why We're Different

Optimizes completed purchases
Learns from historical sales
Understands transactions

Captures customer intent before checkout
Learns from every interaction
Enables AI Commerce

eBezout AI creates value before the purchase is completed
Transforming every interaction into business intelligence.

Where can this intelligence take us beyond retail?

If we can grow.

Building Smarter Food Systems

Startup Program Building the Future of Commerce

Where can eBezout go after supermarkets?

We start with supermarkets, expand the platform across phygital retail, and eventually connect the intelligence to the wider food system.

Market Expansion Path

Market Expansion

Supermarkets

Initial Beachhead

Phygital Shopping

Platform Expansion

Food Systems

Long-term Vision

From supermarkets to the entire food ecosystem

What does the customer experience from start to finish?

The Complete Customer Journey

A guided yet flexible shopping experience

Architecture Overview

How will eBezout make money?

We start with a SaaS platform, then move to AI cross-selling, personalized promotions, and finally, a FinTech ecosystem play.

Revenue Model: Detailed View

Current Revenue: \$0 — Focused on validation and building a repeatable model

Why would a retailer choose eBezout over other solutions?

We make the shopping process more efficient and less friction

Competitive Landscape

Direct Competitors

VipCommerce
App-based Scan & Go

Limitations:

High friction — require new app
Hardware requirements
Transaction-only data

Indirect Competitors

iFood, Uber Eats
Amazon, Walmart

Limitations:

Delivery-focused
Medium friction
Transaction-only data

eBezout AI

QR + Messaging + AI

Advantages:

Lowest friction — no app
Captures intent
Product as channel
Behavioral data moat

Competing on friction, intelligence, and data

How do we get eBezout into supermarkets?

We start with direct conversations, run a real pilot, prove the value, and use that success to win the next retailers.

Go-to-Market Strategy

Phase 1

Direct Sales
Supermarket Visits
Retail Events
Networking

Phase 2

Pilot Program
Local Supermarket
Real Customers
Validation

Phase 3

Case Study
Refine Model
Prove ROI
Build Credibility

Phase 4

Scale
Referrals
Events
Expansion

The primary challenge is not technical development —
it's access to retail decision-makers.

What have we proven so far?

We have built the MVP, proven the concept, and improved the product.

Validation & Traction

✓ MVP with PoC — The core Scan & Go flow works

✓ Bootstrapped & Lean — Capital-efficient operations

✓ Patent Pending — Protected intellectual property

✓ Positive Retail Feedback — Supermarket professionals validate the concept

✓ Pilot Opportunity — A concrete path to real-world validation

Pre-revenue — Focused on validation and learning

How will eBezout handle products sold by weight?

We plan to add a smart scale that can identify produce, read its weight, and turn that information into a QR Code for the customer's cart.

The Smart Scale Roadmap

1. Place Produce

Customer places
produce on
Bluetooth scale

2. AI Identifies

Scale uses AI/
computer vision
to identify item

3. Generate QR

Scale generates
a unique
QR Code

4. Add to Cart

Customer scans
QR Code to add
to digital cart

Future Roadmap — Not part of current MVP

Represents our vision for a fully connected shopping environment

Why look at Southeast Asia?

It combines strong digital ecosystem with physical retail modernization model.

Southeast Asia Expansion

✓ Strong digital ecosystem and high smartphone penetration

✓ Widespread mobile usage and messaging app adoption

✓ Physical retail modernization and AI adoption

✓ Food and logistics ecosystems with regional connectivity

✓ Access to corporate partners, investors, and accelerators

Brazil is the initial validation market

Southeast Asia could become a landing point for regional expansion

Why is eBezout built with a lean team?

We keep the team small and focused on the core business, while leveraging a specialized network of experts to support the company's growth.

Lean Core, Specialized Network

What are we looking for from an investor?

Not just money. We need the right capital and ecosystem.

The Investment Case

Seeking: Smart Money — Not just a check

Use of Funds: \$1,000 — Enhance immediate pilot showcase

Use of Funds: \$7,000 — Build professional, scalable platform

What We Offer: Proven concept, scalable model, massive market

Strategic Value: Partnership for market access and commercialization

Looking for the right capital and ecosystem, not simply the largest check

What could go wrong?

Adoption, retailer change, competition, intent data, solo founder, lean, agile strategy, and adaptation.

Risks & Mitigations

- **Adoption**

- No app, low friction

- **Retailer change**

- QR Code simplicity

- **Competition**

- Intent data focus

- **Solo founder**

- Lean, agile strategy

We are building a business and we are aware of the risks

Smart Scale — Technical Concept

Future Concept — Not currently deployed
Represents our vision for a fully connected fresh produce experience

How can eBezout make food shopping smarter?

AI can help consumers make smarter choices, reduce waste and support local producers

AI Nutrition & Sustainability

Nutritional Intelligence

AI provides real-time nutritional information
Personalized recommendations based on health goals

Waste Reduction

Better demand forecasting
Reduced food waste through smarter planning

Sustainable Choices

AI suggests sustainable alternatives
Support local producers and CSA

Food Security

Better production planning
Resilient food systems

Long-term vision — Building the intelligence layer for food systems

What makes eBezout different from existing retail solutions?

We focus on solving the price-tag problem by enabling the customer to see the price tag and make the purchase decision before the purchase.

✓ = Supported

~ = Partial Support

×

= Not Supported

— = Does not apply

How do we protect customer data?

We build privacy into our platform from day one

Data Privacy & LGPD Strategy

✓ Compliant with LGPD from day one

✓ Clear, transparent customer consent

✓ Aggregated and anonymized data

✓ No sale of personally identifiable information

✓ Data privacy by design, not an afterthought

Trust and transparency are core to our platform

What are we looking for now?

The right people and partners to help us turn our vision into a successful business.

Thank You!

Building the AI Commerce Infrastructure for the Future of Food

Let's Build the Future Together

We aim to transform everyday retail
into a smarter, more connected food ecosystem.
